Description

Spray on Ceramic Insulation Coating formulated for insulating the building envelope. A one-part, spray-on Ceramic Insulation Coating addresses all three types of heat transfer- Conduction, Convection and Radiation. It reflects 97% of solar radiation, lowers the temperature of hot machinery, insulates against ambient temperatures, and eliminates condensation. It is effective as:

- Air Barrier to control air leakage into and out of the building envelope
 - Thermal Barrier to block the transfer of heat or cold
 - Vapor Barrier to block Moisture and Condensation
 - Acoustic Barrier to dampen noise
- ACS CIC 4.0 has been used effectively to reduce energy costs when used in the building envelope.

5 Gallons

Coverage: 250 square feet at 20 mils (0.020"/0.5mm)

20 mil is recommended for reflectivity

40 mils is recommended for insulation properties, applied in thin coats

72 hours is required for the full curing time.

Water Cleanup

Class A Fire Rated
